Step 4: Now Installation is complete. Now follow the steps

- Double-click Docker Desktop Installer.exe to run the installer.

- When prompted, ensure the Use WSL 2 instead of Hyper-V option on the Configuration page is selected or not depending on your choice of backend.

- If system only supports one of the two options, we will not be able to select which backend to use.

- Follow the instructions on the installation wizard to authorize the installer and proceed with the install.

- When the installation is successful, click Close to complete the installation process.

- If admin account is different to your user account, we must add the user to the docker-users group. Run Computer Management as an administrator and navigate to Local Users and Groups > Groups > docker-users. Right-click to add the user to the group. Log out and log back in for the changes to take effect.

Step 5: Docker will start correctly, the left bottom side was shown in green color, docker will show the status of docker app working successfully.
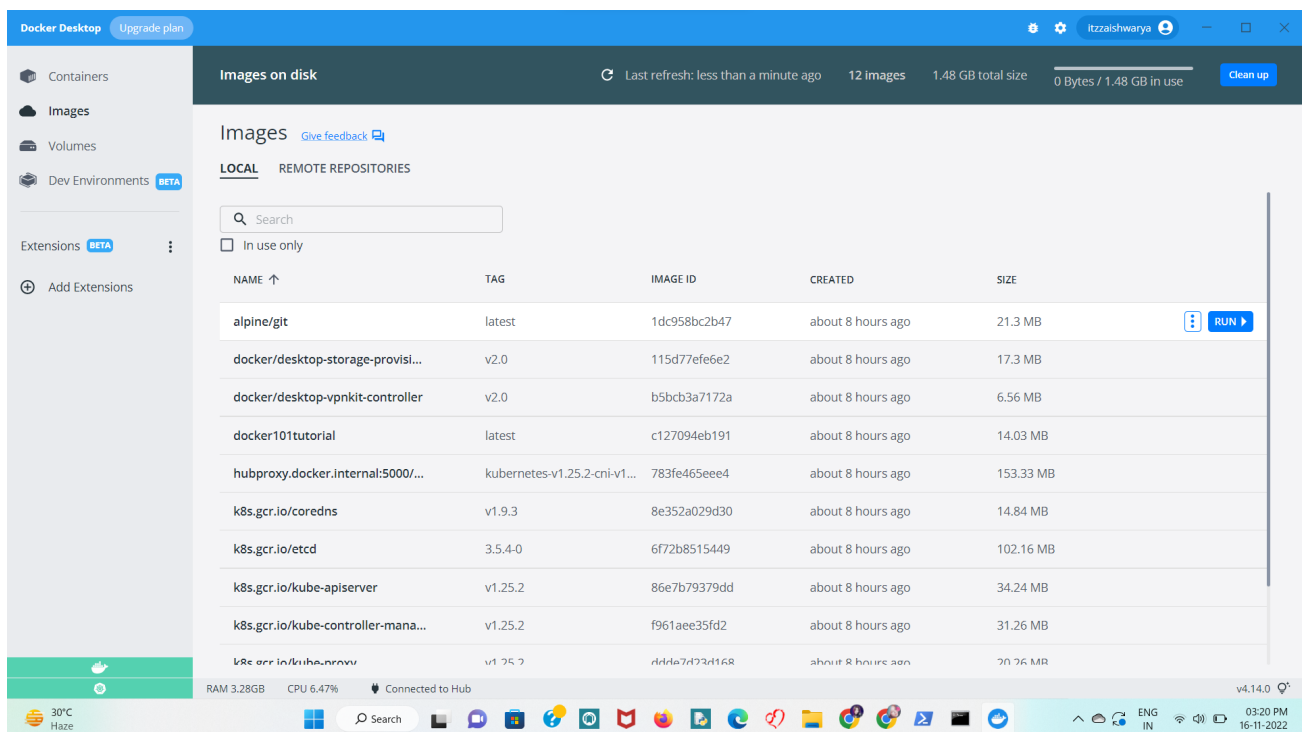

Step 6: Finally, the docker is installed successfully.
